# WHAT'S INSIDE

- ◆ OBJECTIVE
- ◆ INTRODUCTION
- ◆ BACKGROUND STUDY
- ◆ USER OF SYSTEM
- ◆ SOFTWARE AND HARDWARE REQUIREMENTS
- ◆ DATA FLOW DIAGRAM
- ◆ USE CASE DIAGRAM
- ◆ SYSTEM IMPLEMENTATION
- ◆ CONCLUSION

# OBJECTIVE

- Simplify event registration and management processes.
- Increase event attendance and participation.
- Enhance data security and privacy compliance.
- Provide actionable insights through analytics and reporting.
- Support customization to cater to unique event needs.
- Ensure scalability to accommodate events of varying sizes and complexities.

# INTRODUCTION

- We are introducing about Event Registration System.
- This system will perform event registration, attendance registration , user record for registering for an event and data management.
- It becomes easy to efficiently manage event planning and registration processes with this system.

# BACKGROUND STUDY

- Hypertext Markup Language (HTML)
- Cascading Style Sheets(CSS)
- JavaScript(js)
- Express Java
- MySQL

# USER OF SYSTEM

- Administrators
- Event Organizer
- Finance and Accounting Team
- Marketing and Communication Teams
- IT Professionals
- Event Participants

# SOFTWARE AND HARDWARE REQUIREMENTS

## •Hardware(Recommended): -

- ☐ i3 Core or above.
- ☐ Minimum 4 GB RAM or above.
- ☐ Minimum hard disk 40 GB or above.

## •Software(Recommended): -

- ☐ Windows operating system.
- ☐ Express Java–web server
- ☐ MYSQL- a relational database management system

# DATA FLOW DIAGRAM (DFD)

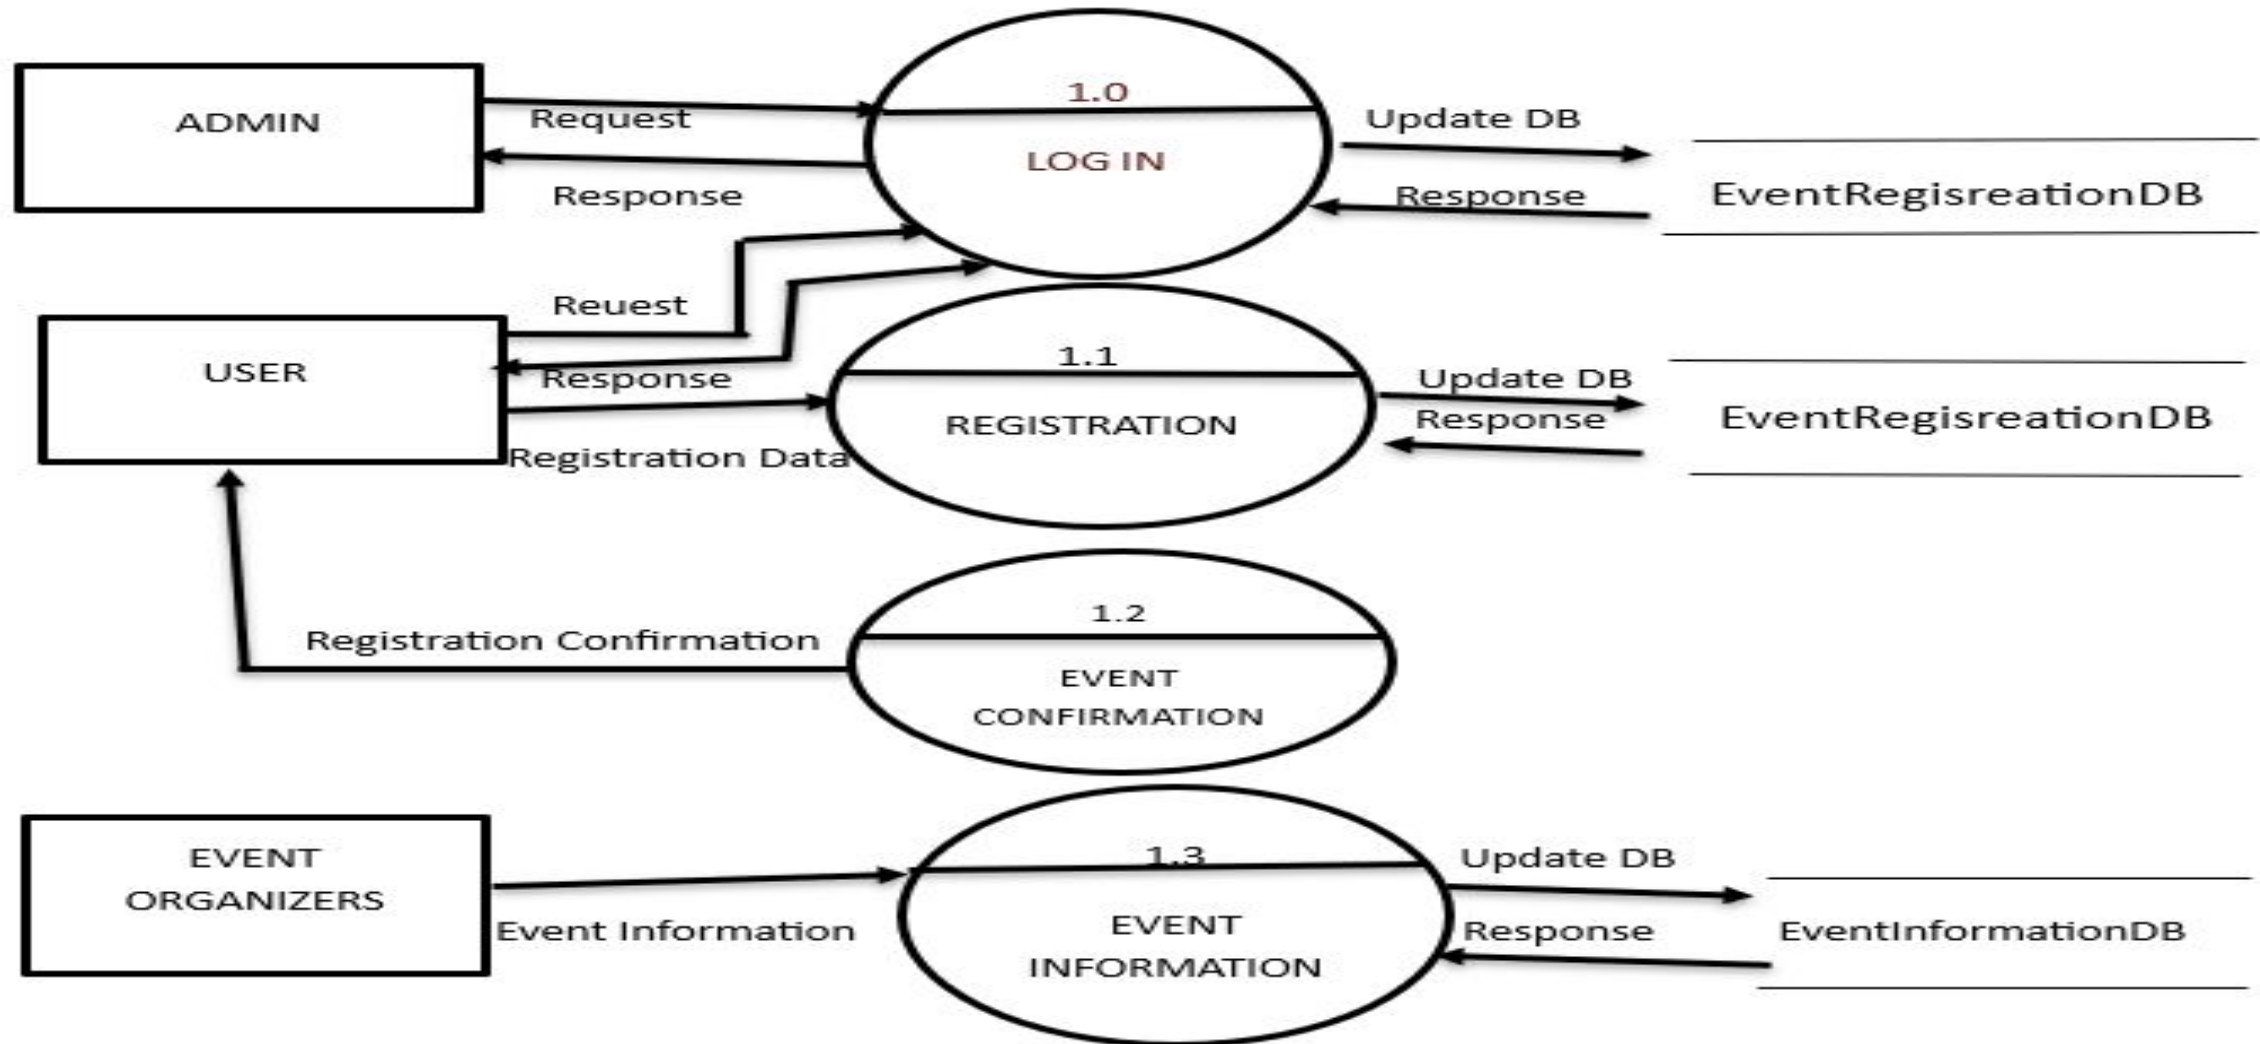

A Data Flow Diagram is a method of speaking to a progression of information through a cycle or a system. The DFD also provides information about the outputs and inputs of each entity and the process itself.

## CONTEXT OR ZERO LEVEL DFD -

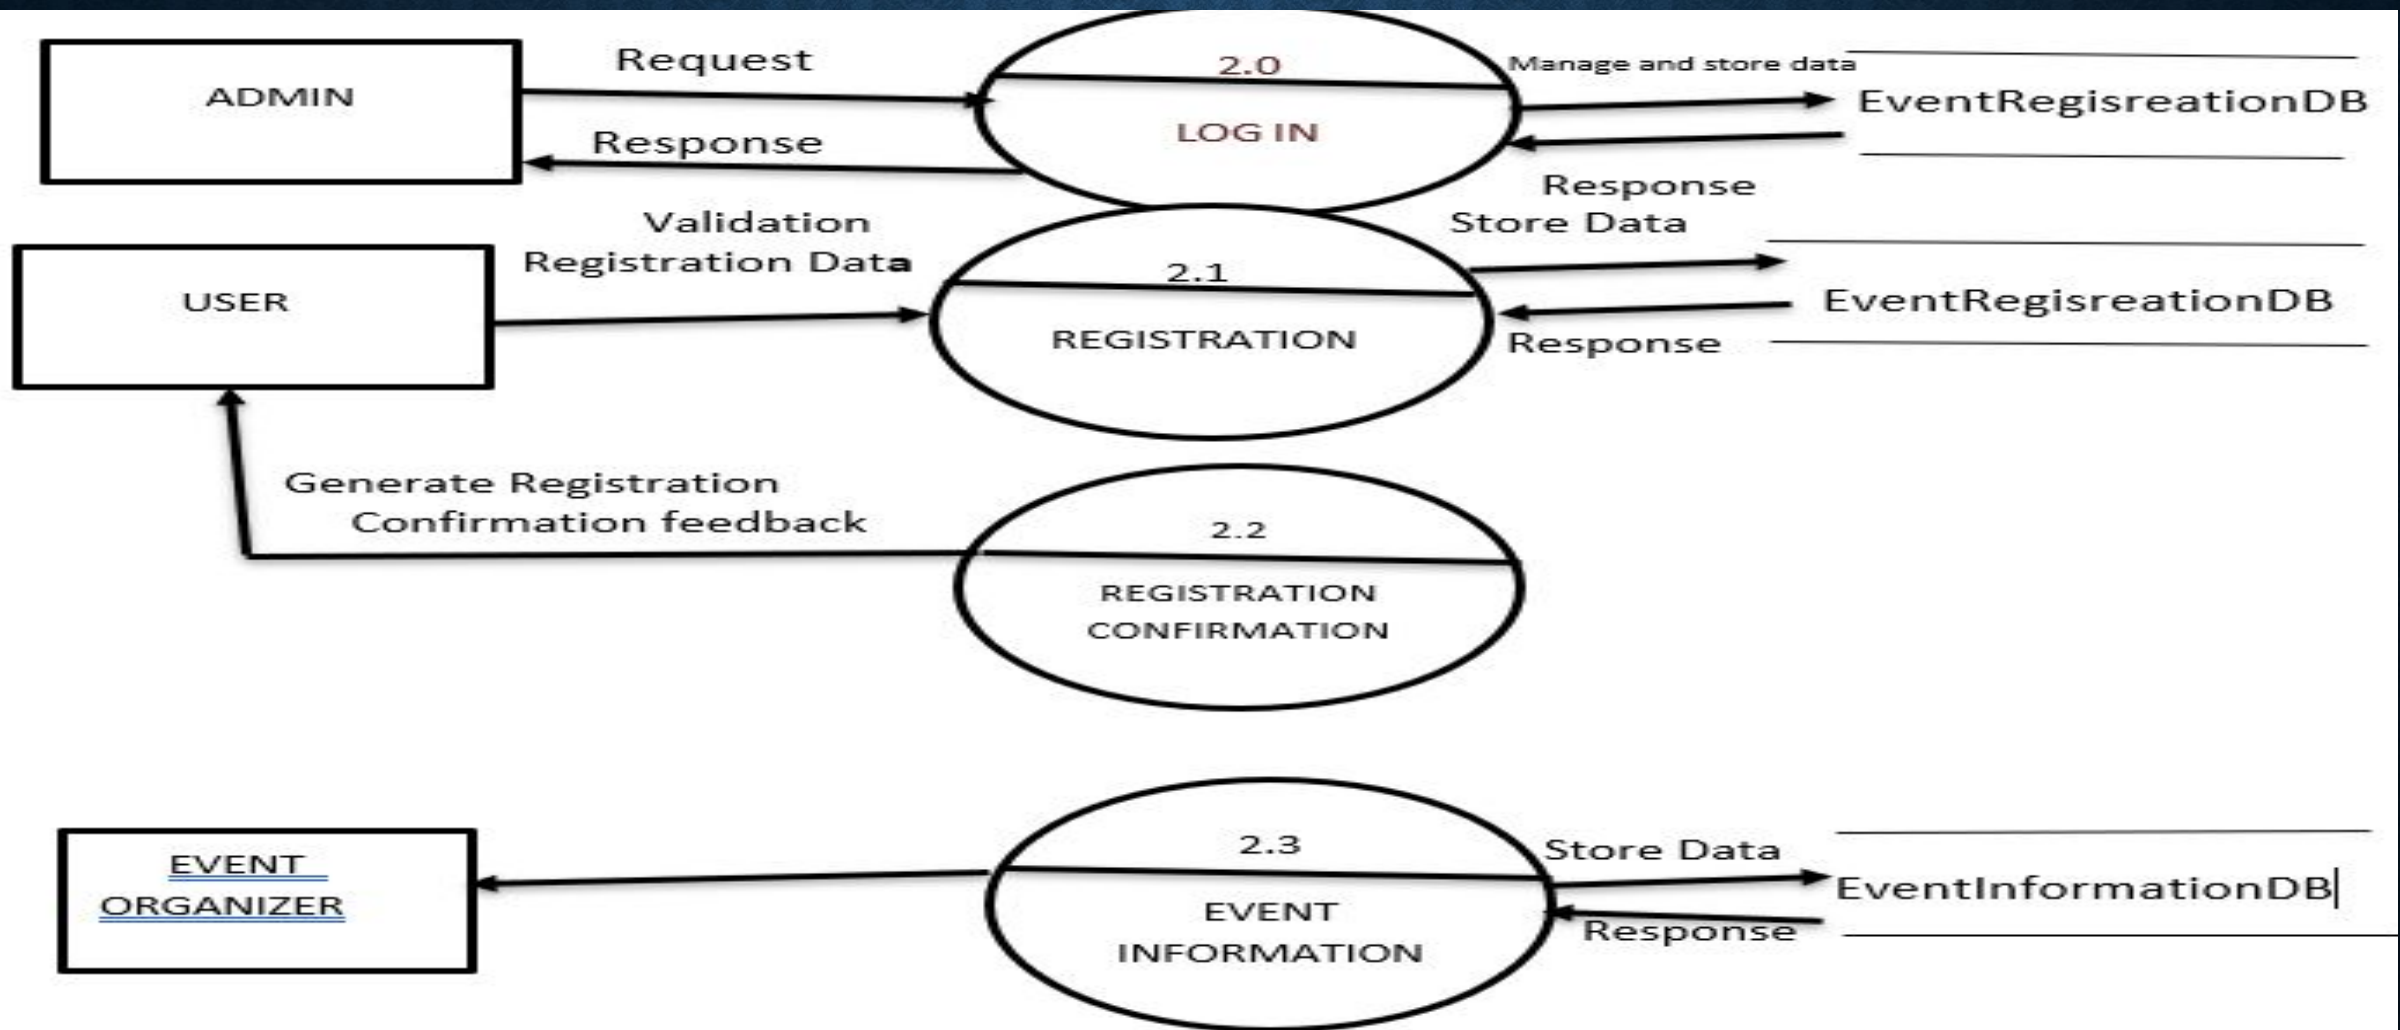

# LEVEL 1 DFD

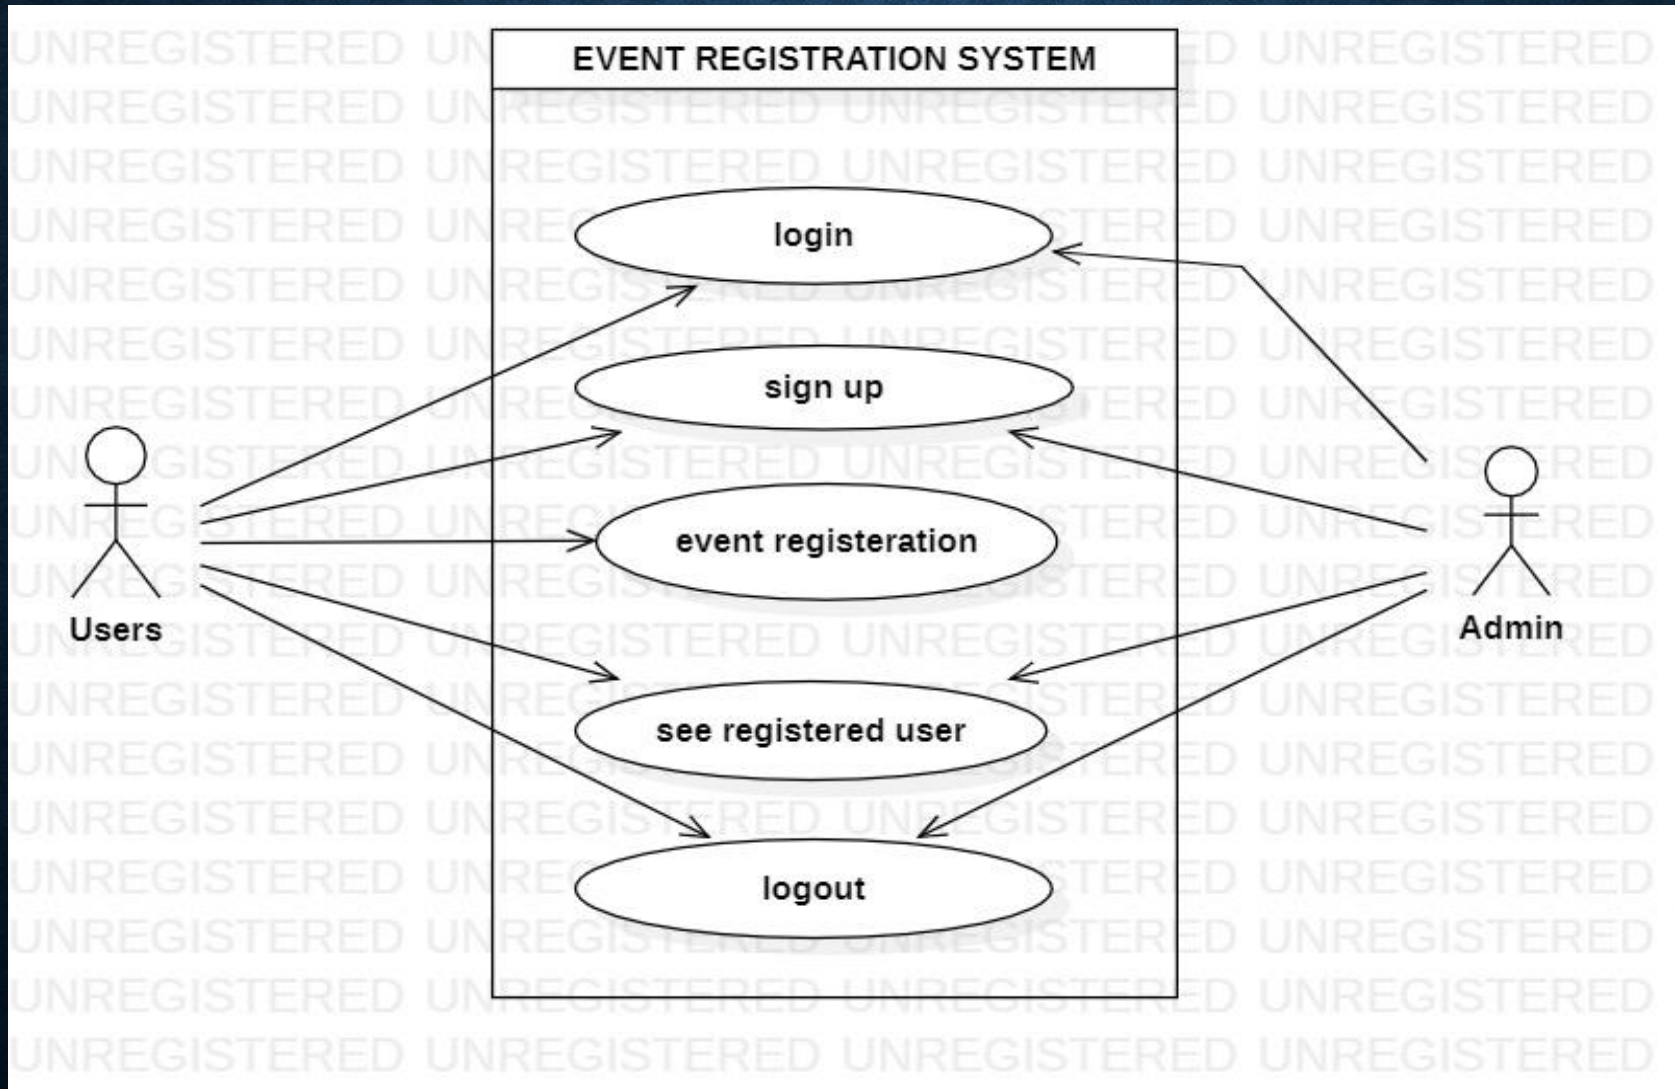

# LEVEL 2 DFD

# USE CASE DIAGRAM

# Database Of Event Registration System

The screenshot shows the VS Code interface for an 'event-management' project. The Explorer panel on the left lists files like 'styles', 'login.css', 'signup.css', 'style.css', 'sql', 'createEvents.sql', 'createUsers.sql', 'showAllEvents.sql', 'showAllUsers.sql', 'src', 'middlewares', 'authorize.js', 'logger.js', 'verifyEmail.js', 'models', 'dataManager.js', 'routes', 'app.js', 'eventRouter.js', 'login.js', 'logout.js', 'serveFile.js', 'signup.js', 'gitignore', 'package-lock.json', 'package.json', and 'server.js'. The SQLBook panel in the center displays a table of users with columns: USERNAME, NAME, SURNAME, EMAIL, and PASSWORD. The table contains three rows of data. The Terminal panel at the bottom shows the output of a web application, including POST /logout, GET /, GET /scripts/script.js, GET /scripts/registration.js, GET /styles/style.css, GET /scripts/prompt.js, GET /scripts/profile.js, GET /images/search.png, and POST /verify. A message 'History restored' is visible in the terminal.

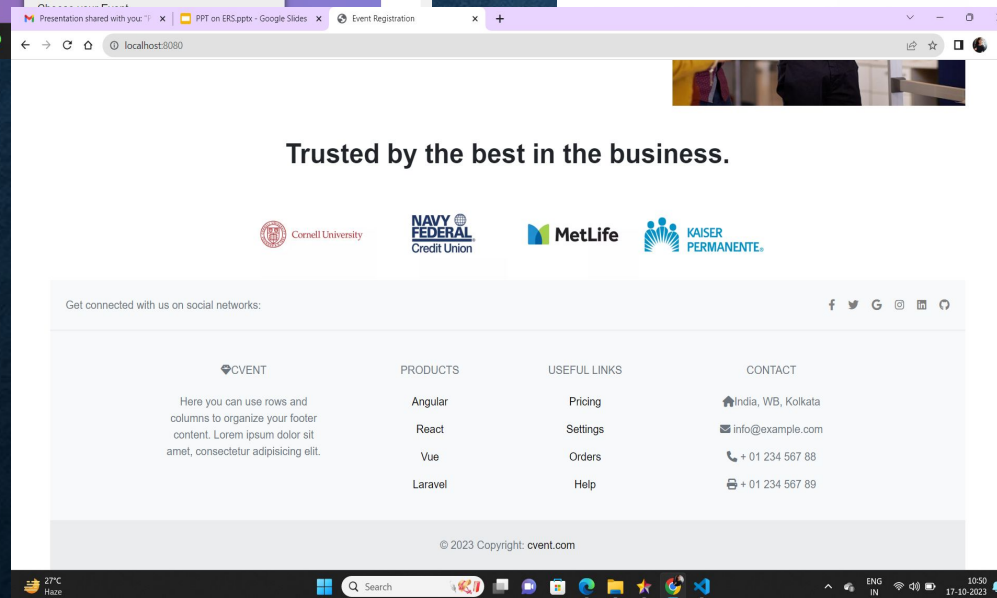

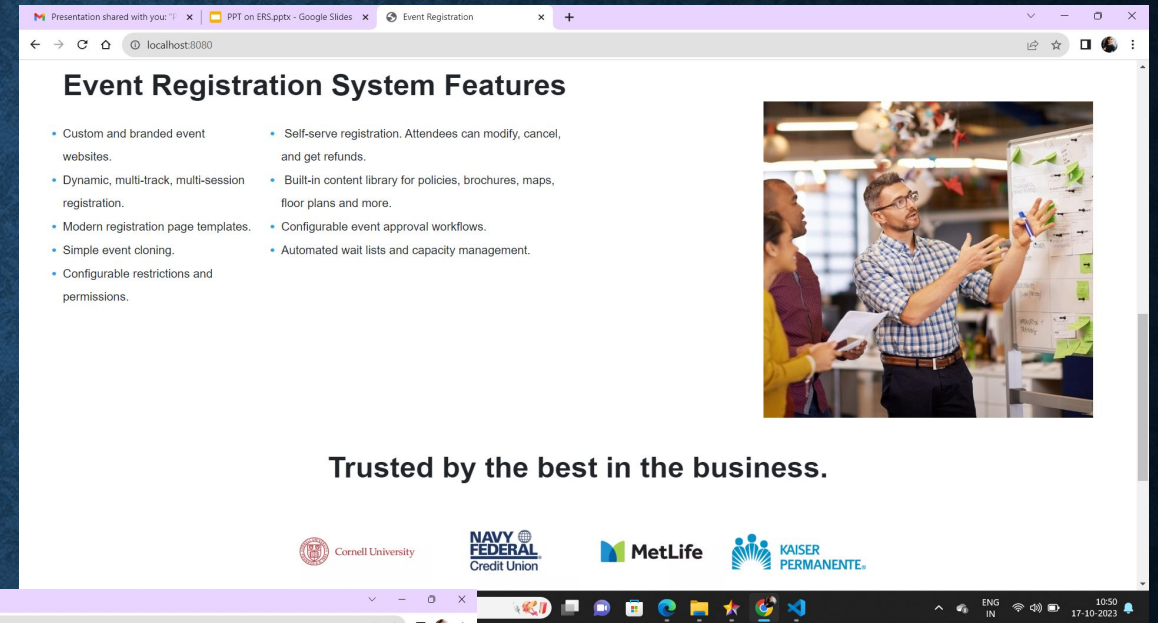

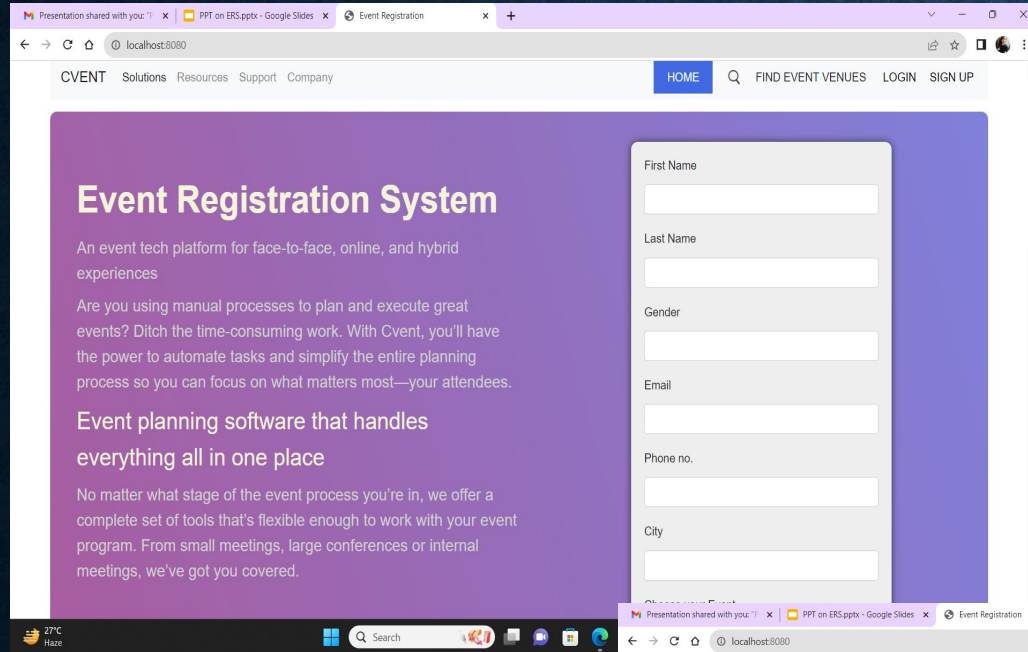

USERNAME	NAME	SURNAME	EMAIL	PASSWORD

# CONCLUSION

The Event Registration System (ERS) is a flexible platform that makes event management, registration, and planning easier. It improves the attendee experience, ensures data security, and offers insightful data. ERS provides customization and scalability, enabling event planners and participants to successfully negotiate the always changing field of event management.

**THANK YOU**
